

UNTHINKABLE - SENIOR SOFTWARE ENGINEER POSITION

Section 01: Role Overview & Responsibilities

We are hiring an exceptional Full-Stack Engineer to architect our multimodal intelligence platform.

You will design distributed document processing pipelines, OCR extraction routines, and vector retrieval systems.

Key Responsibilities:

- Design resilient backend architectures with Node.js, Express, TypeScript, and MongoDB.
- Build intuitive, continuous document viewers in React with sub-50ms citation jumps.
- Maintain 99.9% uptime across our microservices handling 50,000 active daily queries.
- Collaborate with AI researchers on hybrid extractive and generative summarization pipelines.

Section 02: Compensation, Duration & Selection Process

Compensation & Benefits Overview:

Total annual compensation for this role is Rs 3,00,000 with additional performance incentives.

The initial evaluation begins with a mandatory 6 months internship starting August 2026.

Our engineering team currently includes 120 employees operating globally.

We achieved a 30% performance gain in document extraction throughput this year.

Selection Process Stages:

Stage 1: System Architecture Assessment (Zero-failure design under heavy load)

Stage 2: Technical Deep Dive & Code Review (Production TypeScript implementation)

Stage 3: Product Engineering Culture Interview
